

Nature and climate are interconnected. When we protect the most intact, wild places on Earth, and at the same time rewild degraded areas, we can make significant gains towards stabilizing the global climate system. Restoring the web of life in every bioregion is a top priority to secure the integrity of our biosphere.

Featured Hero

Edward Loure

Securing and protecting Indigenous land rights is a pivotal step in protecting biodiversity. Tanzanian tribal activist Edward Loure led a grassroots organization that pioneered an approach that gives land titles to Indigenous communities—instead of individuals—in northern Tanzania, ensuring the environmental stewardship of more than 200,000 acres of land for future generations. [Read more](#) about his inspiring story.

Featured Project

Aligning Agriculture and Conservation at the Jalama Canyon Ranch Center in California

Regenerative agriculture has the potential to bring much needed alignment among agriculture and conservation; and directly address the climate, biodiversity, and food security challenges that we face today. The organization White Buffalo Land Trust recently acquired the Jalama Canyon Ranch and will be creating a 1,000-acre center for regenerative agriculture on California's Central Coast. This project will train knowledgeable and experienced land stewards to help accelerate the transition to regenerative agriculture. Explore this project and others in the [One Earth Marketplace](#).

Thank you for your commitment to solving climate change and creating a vibrant future!
